I'm trying to import a third party components, but it's basically just an image with some text on it. I don't need to edit the components themselves, just their XAML. So I want to be able to copy the XAML and use it on another project. Devices such as printers, plotters, and other types of output devices employ ink jet technology, in which ink is ejected from a set of orifice plates in a print head. As the ink is ejected from the print head, ink droplets are expelled onto a recording medium, for example paper, so that a printed page may be created. The reliability of an output device is generally determined based on the performance of the ink jet print head, which typically consists of a nozzle plate or orifice plate and the drive electronics for the ejection of ink. The construction of the orifice plate is a key determiner of the print head reliability. If the ink supply is not properly sealed and the orifice plate is not adequately protected from damage caused by mishandling, moisture, dust, or other debris, there may be clogging, air bubble occlusions, drying out of ink or other damage that could lead to failed ejectors, a loss of ink, and eventually, to the failure of the entire print head. These problems are more likely to occur in large-volume print heads that have a large number of nozzles or orifices. With reference to FIG. 1, a conventional system for printing information is illustrated. A host 10 is shown coupled to a printing device 12 via a parallel port 14. The host 10 may be a personal computer (PC), a set-top box, a digital camera, or other electronic device. A removable or fixed storage device 16 stores software and data for the printing device 12, and may be, for
