I have a very large series x_1, x_2, \dots, x_N . I have computed the partial sum of the series, and now I would like to compute the limit: $\lim_{N \rightarrow \infty} \left(\sum_{i=1}^N \frac{1}{s^i} - x_i \right)$ I don't want to compute the limit if $s > N$ because as the number of terms get larger and larger, the series will never "see" these very large values of s . That is a waste of computation. What is the best way to compute this limit if s is too big to be included in the series, and $N \gg 33713323$
