This year, EA Sports has also brought a number of brand new animation improvements to the game including facial performances, animations, clothes movements and more. Also, the AI support for teammates has been significantly enhanced. The new game also includes a major upgrade to the game engine, all the visual effects have been retouched and the gameplay mechanics are now simulated more precisely. Check out the video below to see the brand new 'Motion Capture' in action as EA Sports introduces their brand new animated stunt player for this FIFA!

Kirsten Finds a Box of Books at Goodwill & Is Surprised to Find That Some of Them Are By Authors, She's Read Herself! Kirsten Finds a Box of Books at Goodwill & Is Surprised to Find That Some of Them Are By Authors, She's Read Herself! By Betty Drevlow Husband Ted pulled a box of books from Goodwill for his wife Kirsten (a few years ago). Though they'd been married six years, he'd been reading to her from "Wild at Heart" and didn't want to miss any of the action. "I thought I was onto a story, and I was right," said Ted, who still was full of stories of his own about their travels along with some funny anecdotes of things that had happened over the years. Of course, Kirsten had read a few of the movies, and she'd even seen one of the actress' performances on television, but she thought the author of the book wouldn't have anything like the dialogue she'd heard in the movie. "Oh, I read this author!" she exclaimed, remembering the covers she'd seen on the books in the box. "Great writer, and such a good, descriptive, funny story!" Kirsten's initial reaction was doubt and surprise, but then she pulled the first book and was shocked to find it was a collection of stories by the same author she'd just read about. She turned to the last one in the box to see if it was a book on books and found another she'd never heard of. "I was surprised at the number of authors I'd read," she said. "But I couldn't believe it when I read the

Key Motion Capture Features: FIFA 22 players simulate the unique energy and speed you'd expect from the most athletically advanced footballers in the world. Pulsing energy, relentless pace and explosive sprints convey the authentic movements of the most elite players on the planet. HyperMotion Technology also brings physical reactions from each player, including body reactions to physical collisions, more player control and more realistic bodily movements. Player reactions vary from one type of collision to another, on the basis of contact type and body size and mass. More sophisticated collision detection offers more nuanced and realistic contact events in four types of collisions: Envelope - An envelope collision occurs when two body parts come together in a confined space. This occurs when two bodies collide, while they're surrounded by other players, the ball, or the goal line. These collisions can involve the legs, trunk, or head - all of which are part of an envelope. Muzzle - A muzzle collision is when two players' bodies collide at high speeds, essentially with their heads. Slap - A slap collision is when a player's forearm comes into contact with a player's body. Knockdown - A knockdown is when a player is taken to the ground and body parts collide. Physical movements result from these collisions. Simulating the movement of different body parts gives players nuanced physical responses that vary from one player to another. HyperMotion Changes Direction One of the many hallmarks of pro players is their ability to change direction like no other in the game. In FIFA 22, players' movements are more energetic, with players demonstrating greater knee-to-knee, back-to-back acceleration and greater ability to change direction and maintain balance on the ball. These movements create pressure off the ball and off the player, generating variety and excitement in play. FIFA 22 Players React to Contact Positionally, every player reacts differently to contact. Players demonstrate different kicking and body-wise responses to challenges, depending on the area of their body that was impacted. Players react in different ways to challenges involving their arms, legs and ankles, which can affect their ability to retain control of the ball and pass it off to teammates. Every player has different kicking and body-wise responses to challenges, making every FIFA 22 tackle, challenge or aerial duel play out differently. FIFA 22 Players Change Pace The pace of play has changed dramatically in

FIFA is the world's premier videogame franchise featuring the most authentic, complete and dynamic football experience available on any platform. Each FIFA title delivers career-like progression, mastery of the sport's most intricate skills and tactical interaction with players, teams and the ever-evolving authentic football environment. All FIFA games allow gamers to control authentic footballers with ultra-realistic mechanics, while delivering the richest, most immersive football gameplay available. FIFA is a versatile, social football experience delivered in a variety of forms that offer the player a choice of gameplay styles and presentation options. FIFA continues to push the boundaries of game design and technology with each iteration of the game and brings to life the grandeur and spectacle of the sport. FIFA 22 is the definitive football game, developed for the next generation of console platforms with breakthrough gameplay features that redefine the way football is played and the way it is experienced. The FIFA engine includes many innovations, providing the basis for improved gameplay mechanics, while the presentation features key game-changing innovations that redefine the way football is presented to the player. Developed by EA Canada, the studio responsible for the critically acclaimed Deuce™ on PlayStation 2, FIFA 22 delivers the most technologically advanced football game to date. Among its many innovations, the game introduces: Innovative Gameplay - The biggest gameplay innovations introduced in FIFA to date include the return of the Authentic Player Feeling (APF). The APF is EA's proprietary, real-time Player Feel Engine that takes into account all the small but important touches of the game - such as the direction of a player's ball touch - so that the controls feel totally natural. The engine also provides unpredictable ball flight, including on-the-fly catapults, off-the-ball movement and unpredictable spin on shots on goal, to add a truly realistic experience. Pro Attack and Pro Dribbling improvements - More control and creativity than ever before - Pro Attack and Pro Dribbling add an element of precision that has never before been seen in a football game. In Pro Attack, players have more control over the timing and trajectory of their shooting and movement. Pro Dribbling provides players with the ability to stick-slide past opponents and muscle past defenders with increased control. Most importantly, the game's physics engine provides maximum impact with every shot - players are much more agile in the air and realize more speed and power with each run. Individual Player Controls - For the first time, players
