These Dishes Serve Up Eye-Catching Portraits If you couldn't tell from the title, this post is about food. But really, it's all about food. I love food. Mostly I love food that is visually appealing. The shape, color, and design are important and these dishes are eye-catching in an actual meal or a shoot. Here are some of my favorite creations by talented food artists. A bit of a departure from the animal and plant shots, I like these shots taken in San Francisco. They're a little bit more interesting and less robotic. These dishes were some of my first food shots, and they were a lot of fun. I also think these shots have a certain innocence that is gone now. This food is either too bright, or maybe it's too "girly." I like it, but I wouldn't want to eat it. For the most part, I like these dishes. But there are a few that are a little too brightly colored, "shiny" even. These are good food shots, but I think they could be even better. I'll give these a final grade of B+ for now. These are some of my favorite photos of the day. The coloring of the strawberries is really funky, and I like it. These two peppers are so small, and I think this is supposed to be a dish. Who serves two small peppers?Rema takes aim at Apple July 24, 2009 18:42 IST The Japanese patent office's decision to ban the sale of iPhones in Japan for infringing on 'patent' is being seen as another move by Chinese handset maker China Mobile to poach more software engineers from Rema's ranks. In 2004, Apple had sold 100,000 Cookson Infracore-made iPhones in Japan. With China Mobile now in possession of 1.3 billion subscribers, Apple has long been a big deal for the Chinese mobile operator. The Japanese telecom operator, Japan Telecom, has accused Apple of breaching patent protection by selling iPhones in Japan without permission. Japan Telecom has said that Apple's iPhones infringe patents linked to a technique called "contactless communication." In their defence, Apple said the patents were not infringed.Q: Data types in VHDL
